

AI & Future of Work — Student Feature Guide

futureofjobs.vercel.app · Data: BLS OES, O*NET 28.2, Anthropic Claude

This guide explains every feature of the **AI & Future of Work** visualisation tool. Each feature is designed to help you analyse how artificial intelligence is reshaping specific job roles — so you can make strategic decisions about your career or studies.

01 3D Terrain Map

Each glowing peak represents one job role. Peak height = number of people employed in that role. Peak colour = AI automation risk: red means high risk, green means the role is largely safe from automation.

Student tip: Taller peaks mean more jobs exist today — watch them shrink as you move the time slider forward.

02 AI Timeline Slider

Drag the slider from 2025 → 2030 to simulate how AI displaces workers over time. Peaks fall faster for high-risk roles. The animation shows where the biggest structural changes are expected.

Student tip: Compare a Marketing Manager to a Sales Manager at 2030 — notice which peak drops faster and by how much.

03 Job Detail Panel

Click any peak to open a role's full profile: automation risk %, growth outlook to 2032, a list of its most human-critical tasks, and a BLS employment trend sparkline.

Student tip: The "Human Skills" section shows what AI cannot easily replace. These are the tasks worth developing.

04 AI Analysis (Analyze)

Tap the Analyze button on any role. Claude AI reads the O*NET task list and scores each task individually for AI replaceability vs. human criticality — in real time, not from a pre-written database.

Student tip: Every score is freshly generated. The AI reasons about each specific task, so results reflect genuine capability assessment.

05 Scenario Planning

The Scenario button asks "what if" — what happens to this role if AI adoption accelerates, if regulation tightens, or if economic conditions shift? It generates a written strategic brief.

Student tip: Use this to stress-test career choices. Ask the same role under two different scenarios and compare the outlooks.

06 Career Roadmap

Identifies the highest-risk task in a role and builds a personalised 6-month upskilling plan to move away from it — covering specific skills, tools, and learning resources.

Student tip: Available from the Job Detail Panel after running an AI Analysis. The plan is tailored to that specific role's risk profile.

07 My Skills (CV Match)

Paste your CV or a list of your skills. The app analyses which roles align with your strengths and flags where you are most exposed to automation risk.

Student tip: Honest input = honest output. List the skills you actually have, not the ones you wish you had.

08 US Map View

Switch from the 3D terrain to a flat 2D US map. Circle size shows employment concentration by state — so you can see whether automation risk is evenly distributed or regionally concentrated.

Student tip: Toggle using the "Map" button in the top navigation. Useful for understanding local labour market exposure.

09 Job Security Index

The colour legend on the right of the screen maps roles into three bands: High Automation Risk (red), Hybrid/Augmented (amber), and Safe Human-Centric (green). Bands are relative — graded on a curve across all 50 roles shown.

Student tip: A "green" role here means it is safer than most others in this dataset — not that it is completely immune to automation.

10

Data Sources

Employment numbers come from the Bureau of Labor Statistics (BLS) Occupational Employment & Wage Statistics. Task descriptions are sourced from O*NET 28.2. AI risk scores are generated live by Anthropic Claude.

Student tip: Click "Methodology & Data" at the bottom of the screen to read the full sourcing and calculation methodology.
